

Project Design Phase
Proposed Solution Template

Date	15 July 2026
Team ID	
Project Name	Plugging into the Future: An Exploration of Electricity Consumption Patterns
Maximum Marks	2 Marks

Proposed Solution :

S.No	Parameter	Description
1	Problem Statement (Problem to be solved)	Analyzing electricity consumption across Indian states is difficult because the data is spread across multiple files and lacks interactive visualizations. Decision-makers cannot easily compare state-wise, region-wise, monthly, quarterly, and yearly electricity consumption or study the impact of the COVID-19 lockdown on energy usage.
2	Idea / Solution Description	Develop an interactive Tableau Dashboard that transforms raw electricity consumption data into meaningful visualizations. The solution provides state-wise maps, region-wise comparisons, monthly and quarterly trends, Top-N and Bottom-N state analysis, lockdown impact analysis, and an interactive Tableau Story for easy understanding.
3	Novelty / Uniqueness	• Interactive dashboard instead of static reports. • Combines state, regional, monthly, quarterly, and yearly analysis in one platform. • Includes COVID-19 lockdown impact analysis. • Story-based presentation for better data storytelling. • Published on Tableau Public for easy online access.
4	Social Impact / Customer Satisfaction	The dashboard helps government officials, researchers, students, businesses, and energy analysts make informed decisions. It improves transparency, saves analysis time, supports policy planning, and enables users to understand electricity consumption trends through interactive visualizations.
5	Business Model (Revenue Model)	Basic dashboards can be shared publicly through Tableau Public. Advanced versions may be offered to government departments, electricity boards, research organizations, or private companies through consulting services, custom dashboards, analytics solutions, training, and maintenance contracts.
6	Scalability of the Solution	The solution is scalable and can easily incorporate new yearly datasets, additional states or regions, renewable energy statistics, weather data, smart meter data, or live electricity consumption feeds. It can also be extended into a cloud-based analytics platform with predictive forecasting and AI-driven insights.
